Vein diagnostics

The Capio Mosel-Eifel-Klinik is among Germany's largest vein clinics. The clinic is a contractual partner to all statutory and private health insurance providers for the provision of care - and can co-ordinate financial aid.

Please schedule your appointment for a preliminary exam by phone: +49 (0)2674 940-0, or by e-mail: info.cmek@de.capio.com.

If you are insured under a statutory health insurance scheme, please bring your health insurance card as well as already existing findings reports with you.

The preliminary exam lasts approx. one hour - and is risk-free as well as pain-free. For this purpose, state-of-the-art ultrasound- and infrared light-based medical-engineering devices are available.

Approximately three months after the vein operation, a follow-up exam takes place to verify the treatment success.

Gentle and aesthetic therapies

In the Capio Mosel-Eifel-Klinik, we use reasonable, new high-tech procedures, apart from tried and tested methods which we have perfected to the highest degree. All interventions are carried out under gentle and completely risk-free local anaesthesia which has already been applied in more than 300,000 cases without any complication so far. We also offer surgery under general anaesthesia to take full account of the special medical requirements of our patients.

The applied surgical and anaesthetic techniques are not or only slightly stressful for the patient, and are therefore suitable for older patients as well.

Academic expertise

In co-operation with universities, we are involved in future-oriented studies which are accepted on the international level.

In comparison with centres worldwide, our scientific results - with a recurrence rate of 1.6 % (in terms of the recurrence of varicose veins as well as the lowest incidence of operative risks) - definitely rank at the top.

VEIN-PRESERVING SURGICAL TECHNIQUES
